Dear Mr Duarte

COP 2024/00148: ARTICLE 53 EMERGENCY AUTHORISATION FOR THE USE OF 'EXIREL 10SE' ON RASPBERRY AND BLACKBERRY

Thank you for your application dated 26 January 2024 for an emergency use of 'Exirel 10SE' on outdoor and protected raspberry and blackberry for control of spotted wing drosophila (drosophila suzukii). Ministers have agreed to grant an emergency authorisation under Regulation No 1107/2009 until 31 October 2024 for :

Product name: Exirel 10SE (contains cyantraniliprole)

This emergency authorisation for the specific use set out in the notice, has been given the following expiry dates:

- (a) for placing on the market: 5 October 2024
- (b) for use: 31 October 2024
- (c) for storage and disposal of stocks: 30 November 2024

The emergency authorisation is attached to this letter.

This authorisation applies to use in England and Scotland.

Requested 1-day pre-harvest interval (PHI)

In line with the previous emergency authorisations, the PHI for raspberry and blackberry has been set at 3 days. The residue trials only support a PHI of 3 days as that is the only day when samples were harvested in some of the trials. There are insufficient trials sampling 1 day after treatment to support a PHI of 1 day.

Copy recipients

Copies of this covering letter and the emergency authorisation are being distributed to the Registration Officer(s) of the product's manufacturer and supplier.

HSE

Horticulture Crop Protection Ltd

Rural Innovation Centre,

Conditions of future emergency authorisation

By their nature, emergency authorisations may be issued without the full range of data which would support a standard authorisation. Therefore, this emergency authorisation specifies data requirements to address the missing information and stewardship measures to provide safeguards which are considered necessary to ensure the protection of health and the environment. HSE may require such data and information to be provided as part of any repeat application for the same use.

Failure to provide this information may be relevant to HSE's assessment of any repeat application for the same use. This information may assist the applicant to demonstrate that the requirements for granting an emergency authorisation are met.

Note on consumer exposure assessment:

As part of the assessment, exposure to processing degradation products IN-N5M09 and IN-F6L99 was estimated using limited processing data and non-standard extrapolation of available processing factors. Please note that the conclusions were made in the context of emergency authorisations. ER/ROs for cyantraniliprole in/on various commodities have been published at <u>New MRLs (hse.gov.uk)</u>, the most recent being <u>The evaluation of new MRLs for cyantraniliprole in or on various commodities</u>. The exposure estimates would need to be considered for any additional or more critical uses. Therefore, we would like to make you aware that, for future applications for uses of cyantraniliprole, it may be necessary to generate additional processing data to reliably estimate/refine estimates of exposure to IN-N5M09 and IN-F6L99 in processed commodities.

Yours sincerely
